Osnova kurzu

What is Artificial Inteligence?
- This is an introductory course on artificial intelligence (AI). In the course, we discuss what AI is and why it is important, and take a brief look at machine learning and deep learning—which are subsets of AI—and describe how Amazon uses AI in its products.

What is Machine Learning?
- This course introduces you to machine learning concepts and the role data plays. We explore use cases, discuss an innovative way to build smart applications, and review the AWS frameworks and services you can use for machine learning.

What is Deep Learning?
- This introductory course provides an overview of Deep Learning (DL) concepts. In the course, we discuss the AWS services available for DL and walk through a case study of an AWS customer who is innovating with DL.
